CONFIRMATION

Herewith we, WERZALIT LEMN TECH SCS confirm that we use only raw materials that are environmentally-safe, which are processed according to local and Western-European Environment- and Safety requirements.

As logs we use only beech (*Fagus Sylvatica*) that come from sustainable forests in the areas in Western Romania. In principle the Romanian forests are sustained yield managed. A FSC-certification of the forest areas is in process.

The WERZALIT LEMN TECH SCS has only serious business partners as suppliers, which respect and follow the legal and ecological demands. The origin, the quantity and quality of the logs are permanently controlled and monitored at several locations.

WERZALIT supports the EU regulation 995 / 2010 with all its means.

Beside of the general, responsible utilization of wood and supporting sustained yield forest management, WERZALIT can offer as well products, which are produced under FSC COC standard.

In that case WERZALIT Lemn Tech is qualified to produce and purchase furniture components in 100 % FSC by transfer system.
